Site Water Management Planning Class

Developing Site Level Water Management
Plans for Exterior Water Use

Oct 5th & 6th 2009

(One day class, offered twice)

8:00 am—4:00 pm

(see WSI program for room location)

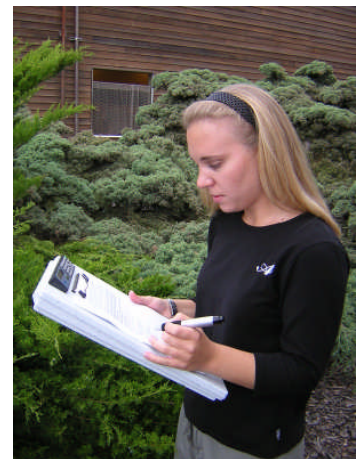

Learn the specifics of creating a water management plan based on in-depth site analysis and Return on Investment projections.

Class includes manual and spreadsheet CD for developing charts & graphs of historical, budget, estimated and actual water use comparisons

Highlights

- How to obtain and analyze past water usage
- Calculating water budgets
- Conservation measure analysis and selection
- Return of Investment (ROI)
- Site profile creation
- Potential dollar and water savings estimates

“As a utility representative, I see customers drastically over-watering because they simply don't know how to water for their particular site conditions. In addition, research shows that the average automatic in-ground irrigation system wastes at least 30% of the water used. "Site Water Management Planning" is a thorough and comprehensive handbook for assessing a landscape's past water use and planning the most efficient irrigation system possible to keep that landscape healthy.”

*Jenna Smith, Water Efficient Irrigation Program Manager
Seattle Public Utilities*

“Tim Wilson brings his broad expertise to print in this practical guide for field professionals. Wilson establishes the vital importance of managing our water resource, but swiftly gets down to business by explaining the direct benefits to green industry professionals and their clients. As water use policies throughout the U.S. set higher expectations for the green industry, this book and class serve as a "how-to" manual for the hands-on professional.”

Doug Bennett, Conservation Manager, Southern Nevada Water Authority

Class will be held at the Water Smart Innovation conference

Class cost is \$175.00 and includes book, CD and handouts

Payment maybe be by PayPal online www.iwms.org or check. please mail checks to:
